I tested 30+ community Claude Skills for a week. Here's what actually works (complete list + GitHub links)

Workaround

I spent a week testing every community-built Claude Skill I could find. The official ones? Just scratching the surface.

So when Skills launched, I did what everyone did - grabbed the official Anthropic ones. Docx, pptx, pdf stuff. They work fine.

Then I kept seeing people on Twitter and GitHub talking about these community-built skills that were supposedly changing their entire workflow.

But I had a week where I was procrastinating on actual work, so... why not test them?

Downloaded like 30+ skills and hooks. Broke stuff. Fixed stuff. Spent too much time reading GitHub READMEs at 2am.

Some were overhyped garbage. But a bunch? Actually game-changing.

Disclaimer: *Used LLM to clean up my English and structure this better - the research, testing, and opinions are all mine though.*

Here's the thing nobody tells you:

Official skills are like... a microwave. Does one thing, does it well, everyone gets the same experience.

Community skills are more like that weird kitchen gadget your chef friend swears by. Super specific, kinda weird to learn, but once you get it, you can't imagine cooking without it.

THE ESSENTIALS (Start here)

Superpowers (by obra)

The Swiss Army knife everyone talks about. Brainstorming, debugging, TDD enforcement, execution planning - all with slash commands.

That `/superpowers:execute-plan` command? Saved me SO many hours of "ok Claude now do this... ok now this... wait go back"

Real talk: First day I was lost. Second day it clicked.

Link: https://github.com/obra/superpowers

Superpowers Lab (by obra)

Experimental/bleeding-edge version of Superpowers. For when you want to try stuff before it's stable.

Skill Seekers (by yusufkaraaslan)

Point it at ANY documentation site, PDF, or codebase. It auto-generates a Claude Skill.

The moment I got it: We use this internal framework at work that Claude knows nothing about. Normally I'd paste docs into every conversation. Skill Seekers turned the entire docs site into a skill in 10 minutes.

Works with React docs, Django docs, Godot, whatever. Just point and generate.

Link: https://github.com/yusufkaraaslan/Skill_Seekers

DEVELOPER WORKFLOW SKILLS

Test-Driven Development Skill

Enforces actual TDD workflows. Makes Claude write tests first, not as an afterthought.

Found in: https://github.com/obra/superpowers or https://github.com/BehiSecc/awesome-claude-skills

Systematic Debugging Skill

Stops Claude from just guessing at fixes. Forces root-cause analysis like an experienced dev.

Saved me at 2am once during a production bug. We actually FOUND the issue instead of throwing random fixes at it.

Found in: https://github.com/obra/superpowers

Finishing a Development Branch Skill

Streamlines that annoying "ok now merge this and clean up and..." workflow.

Found in: https://github.com/BehiSecc/awesome-claude-skills

Using Git Worktrees Skill

If you work on multiple branches simultaneously, this is a lifesaver. Makes Claude actually understand worktrees.

Found in: https://github.com/BehiSecc/awesome-claude-skills

Pypict Skill

Generates combinatorial testing cases. For when you need robust QA and don't want to manually write 500 test cases.

Found in: https://github.com/BehiSecc/awesome-claude-skills

Webapp Testing with Playwright Skill

ffuf_claude_skill

Security fuzzing and vulnerability analysis. If you're doing any security work, this is it.

Found in: https://github.com/BehiSecc/awesome-claude-skills

Defense-in-Depth Skill

Multi-layered security and quality checks for your codebase. Hardens everything.

Found in: https://github.com/BehiSecc/awesome-claude-skills

RESEARCH & KNOWLEDGE SKILLS

Tapestry

Takes technical docs and creates a navigable knowledge graph. I had 50+ API PDFs. Tapestry turned them into an interconnected wiki I can actually query.

Found in: https://github.com/BehiSecc/awesome-claude-skills or https://github.com/travisvn/awesome-claude-skills

YouTube Transcript/Article Extractor Skills

Scrapes and summarizes YouTube videos or web articles. Great for research without watching 50 hours of content.

Found in: https://github.com/BehiSecc/awesome-claude-skills

Brainstorming Skill

Turns rough ideas into structured design plans. Less "I have a vague thought" more "here's the actual plan"

Found in: https://github.com/obra/superpowers

Content Research Writer Skill

Adds citations, iterates on quality, organizes research automatically. If you write content backed by research, this is huge.

Found in: https://github.com/BehiSecc/awesome-claude-skills

EPUB & PDF Analyzer

Summarizes or queries ebooks and academic papers. Academic research people love this one.

Found in: https://github.com/BehiSecc/awesome-claude-skills

Invoice/File Organizer Skills

Smart categorization for receipts, documents, finance stuff.

Tax season me is SO much happier. Point it at a folder of chaos, get structure back.

Found in: https://github.com/BehiSecc/awesome-claude-skills

Web Asset Generator Skill

Auto-creates icons, Open Graph tags, PWA assets. Web devs save like an hour per project.

Found in: https://github.com/BehiSecc/awesome-claude-skills or https://github.com/travisvn/awesome-claude-skills

CLAUDE CODE HOOKS (If you use Claude Code)

Hooks are event-driven triggers. Claude does something → your hook runs. Super powerful if you know what you're doing.

johnlindquist/claude-hooks

The main one. TypeScript framework with auto-completion and typed payloads.

If you're doing ANYTHING programmatic with Claude Code, this is your foundation.

Warning: You need to know TypeScript. Not beginner-friendly.

Link: https://github.com/johnlindquist/claude-hooks

CCHooks (by GowayLee)

Python version. Minimal, clean abstraction. Fun to customize if you prefer Python.

Search "GowayLee CCHooks" on GitHub or check: https://github.com/hesreallyhim/awesome-claude-code

claude-code-hooks-sdk (by beyondcode)

PHP/Laravel-style hooks. For the PHP crowd.

Search "beyondcode claude-code-hooks" on GitHub or check: https://github.com/hesreallyhim/awesome-claude-code

Claudio (by Christopher Toth)

Adds OS-native sounds to Claude. Sounds silly but people love the "delightful alerts"

Beep when Claude finishes a task. Ding when errors happen. It's weirdly satisfying.

Search "Christopher Toth Claudio" on GitHub or check: https://github.com/hesreallyhim/awesome-claude-code

Desktop notifications, session reminders, progress alerts. Know when Claude finishes long tasks.

Super useful when Claude's running something that takes 10 minutes and you're in another window.

Found in: https://github.com/hesreallyhim/awesome-claude-code

codeinbox/claude-code-discord

Real-time session activity notifications to Discord or Slack. Great for teams or just keeping a log of what Claude's doing.

Link: https://github.com/codeinbox/claude-code-discord

fcakyon Code Quality Collection

Various code quality hooks - TDD enforcement, linting, tool checks. Super comprehensive.

If you want to enforce standards across your team's Claude usage, this is it.

Search "fcakyon claude" on GitHub or check: https://github.com/hesreallyhim/awesome-claude-code

TypeScript Quality Hooks (by bartolli)

Advanced project health for TypeScript. Instant validation and format-fixers.

Catches TypeScript issues before they become problems.

Search "bartolli typescript claude hooks" on GitHub or check: https://github.com/hesreallyhim/awesome-claude-code

What I learned:

Works:

- Skills solving ONE specific problem really well
- Dev-focused skills have highest quality (devs scratching their own itch)
- Hooks are insanely powerful if you invest time learning them
- Documentation-to-skill generators (like Skill Seekers) are secretly the most useful

Doesn't work:

- Vague "makes Claude smarter" skills
- Complicated setup that breaks on every update
- Skills that try to do too much at once

Who this is for:

Casual Claude chat? Official skills are fine.

Working with custom/internal tools? Skill Seekers changes everything.

How to actually try this:

For beginners:

1. Start at https://github.com/travisvn/awesome-claude-skills or https://github.com/BehiSecc/awesome-claude-skills
2. Install Superpowers if you code, Skill Seekers if you work with docs
3. Try Invoice Organizer or Tapestry if you're non-technical
4. Read the README before installing

For developers:

1. Get Superpowers + Systematic Debugging immediately
2. Try TDD Skill and Git Worktrees Skill
3. Learn johnlindquist/claude-hooks if you use Claude Code
4. Explore fcakyon's quality hooks for code standards

For researchers/writers:

1. Tapestry for knowledge management
2. Content Research Writer for citations
3. YouTube/Article Extractors for quick research
4. EPUB/PDF Analyzer for academic work

For Claude Code users:

1. https://github.com/johnlindquist/claude-hooks as foundation
2. CC Notify for task completion alerts
3. fcakyon Code Quality Collection for standards
4. Claudio if you want fun sound effects (you do)

Main Resource Hubs:

- https://github.com/BehiSecc/awesome-claude-skills (Skills)
- https://github.com/hesreallyhim/awesome-claude-code (Hooks)

When stuff breaks:

- Check Claude Projects settings - manually enable skills
- Restart Claude Code (fixes 80% of issues)
- Read the GitHub Issues - someone else hit your problem
- Most skills need to be in the right directory structure

What are you using?

- Non-dev use cases (most of this is technical)
- Creative/content workflows
- Business automation that actually works

Or if you've built something cool with hooks, I want to see it.

I tried to build a meeting summarizer skill to summarize meetings at a useful level of detail and dump them into Obsidian. After building it, my Obsidian MCP started crashing like a drunk driver. Can't figure out if they were related or not.

I guess what I'm really saying is that I need to figure out how to create Dev and Prod environments in Claude Desktop.

18 Reply ···

Sudden_Cantaloupe663 • 5mo ago

Wanna share this? Good idea. I still haven't cracked using LLMs well with obsidian.

2 Reply ···

scipio42 • 5mo ago

I haven't either. I just installed the obsidian MCP tool and asked Claude to write to my vault. It seems to use a ton of tokens though, so hoping there's a better way.

1 Reply ···

fs2d • 4mo ago • Edited 4mo ago

don't use obsidian MCP or a tool built for that directly - just have claude write notes to a .md and dump them into a folder that is already connected to your obsidian vault via anthropic's stock filesystem MCP.

no issues.

it also works both ways. so when i make edits to something in obsidian, claude has visibility into those changes immediately via the read_file tool.

Reaper_1492 • 3mo ago

It's so freaking nuts that I've been looking for this all over the place, and just so happens other people are too - but nothing exists for it 🤦‍♂️

kottkrud • 5mo ago

For a beginner like me, this review was really helpful. Thank you.

5 Reply ···

ArielCoding • 5mo ago

This is solid. You identified one piece that usually breaks workflows: data access to business data, marketing, performance, sales, whatever. When your hooks can work with real up to date information, your brainstorming skill has current metrics and planning knows what actually happened, then Claude understands your actual situation. Now with MCP servers you can use ETL tools like Windsor.ai to feed your workflows with data context data.

screenslaver • 5mo ago

The incredible amount of experimentation, customization, community sharing going in the Claude dev community makes me feel like a systematized evaluation + incorporation of community tools & improvements is the actual future of continuous model evolution, and "self improving superintelligence" that doesn't require any human input is much much farther off.

Thanks for sharing! I made similar learnings and have combined all my best-practices about Skills into my own Framework called Claude Code Pro, which I use myself to work in professional software projects: https://github.com/maxritter/claude-code-pro

I tried to build my first Claude Skill to make a complaint llms.txt file from a single website url, Is anyone available to test it?

1 Reply ···

ThanhDongNguyen • 4mo ago

Skill feature in Claude is superpower. But it is too hard , it need you have more than knowledge about: write, coding,....

I'm building new tool can help you create Skill and download, import it to Claude: http://makeskill.cc/

whincwu • 4mo ago

Thank your share. After have tried many skills from community , i found what i really need are meta skills copilot me creating any skills. Claude code provides a plugin development toolkit help me to do this work easily. https://github.com/anthropics/claude-code/blob/main/plugins/plugin-dev/README.md

1 Reply ···

No_Turn_5206 • 3mo ago

I cant seem to install **Superpowers** (by obra) correctly. Anyone got the same problem?

1 Reply ···

[deleted] • 3mo ago

It should be pretty simple!

If you're still wondering how to install it this is how I do it.

Inside Claude code

```
/plugin marketplace add obra/superpowers-marketplace
/plugin install superpowers@superpowers-marketplace
```

Top 1% Poster

You should check out this skill for interface design; it extends the official frontend design skill and it's quite impressive.

Wha hooks would you start with if using that typescript Claude hook plugin?

1 Reply ···

Least-Cut4033 • 2mo ago

Esto funciona actualmente en antigravity o solo con claude?

1 Reply ···

ParapenteMexico • 22d ago

Cool list of skills. Will try them out. Thanks for sharing.

1 Reply ···

Due_Huckleberry_7064 • 13d ago

Dumb question, if I add this skills to my Claude, it can give access to my information for the developers who created the skills?

1 Reply ···

Somar83 • 8d ago

AffectionateMath1251 • 6d ago

sooolid testing methodology. ive been running claude code daily for about a year and the systematic debugging hook is a game changer - catches type mismatches before they become runtime errors. the typescript hooks method is worth the setup time
